Stanislau Kostka
Front-end developer

Profile

I started my career at the end of 2021 as a web developer. In the autumn, I did private orders, until in 2022 I got a job at Taqtile as a Front-End developer. I was happy to learn new technologies and improve myself by working in a team on commercial projects. At the end of 2022, I was also developing an application for startups from scratch. I meet any difficulties with a smile and questions in order to solve them quickly and competently. I have a year and a half of development experience in this area. I have experience in developing hybrid applications for Android and IOS. I am constantly learning something new.

Technology stack: HTML5, CSS3, SCSS, JavaScript, TypeScript, React, Capacitor, Ionic, MaterialUI, Bootstrap, Express.
